EXPORTS...

*... their importance to
the United States economy*

Exports play an important role in our economy and in the increasingly interdependent world economy. The United States is the world's largest exporter—currently selling \$200 billion of U.S. goods abroad—and is the world's largest economy. With 5 percent of the world's population, our country produces 24 percent of the world's industrial goods.

Exporting provides a broader marketing base for U.S. firms and is considerably more important than many Americans realize. Exports currently account for 5 million jobs in the United States. On average, 25,000 jobs are generated per \$1 billion of U.S. merchandise exports.

Many jobs depend on exports

Employment generated by exports is much greater than the number actually employed in producing the final products shipped abroad. Exports create a large demand for employment that spreads throughout our economy. This includes all the jobs needed to produce goods and services supplied to export producers, the jobs needed by the export producers to produce exports, and the jobs needed to move products to our ports or borders for transport to other countries.

Most of the export-related jobs are in manufacturing and services. According to the latest estimates, 49 percent of the jobs are in manufacturing, 37 percent in services, and 14 percent in production of nonmanufactured goods. The importance of export employment varies among the industries. About one out of every eight Americans currently employed in manufacturing is dependent on exports of manufactured goods. About one out of every six jobs producing nonmanufactured goods and one out of 24 jobs in services are export-related.

Exports affect production and employment in all industries, not just in a few major export industries. For example, while the primary metals industries directly export about \$6 billion of their products annually, an additional \$21 billion of steel and other metals are exported in the form of American-made computers, aircraft, tractors, and other manufactured goods.

Exports are of great importance to America's farmers as well. They account for \$1 of every \$4 of farm sales. Likewise, many jobs in the coal mining and mineral industries, as well as a considerable number in the fishing industry, are dependent on overseas

sales. Exports also support employment in the trucking, rail transport, insurance, and other service industries.

Exports essential

But the basic importance of exports is that they are the principal means by which America pays for its purchases from foreign countries. The United States imports proportionately far less than other major countries, but imports have become increasingly important to the American standard of living—and they have to be paid for. The other major industrial nations generally cover the cost of the goods they import by their exports. Merchandise exports and imports each account for an average of about 20 percent of the gross national product in that group of countries. American exports, however, were only 5.9 percent of GNP in 1983, while the ratio of imports to GNP stood at 7.8 percent. This gap between exports and imports is the trade deficit, which amounted to \$57.6 billion in 1983.

The strength of our exports means a great deal to America. Exports are important to all the 50 states, and each state plays a significant role in meeting the need to export more. This report helps explain that role and shows the significance of exports in relation to employment and production.

Production

Illinois Export Highlights

Illinois ranked third among the 50 states in exports of manufactured goods in 1981. Exports totaled \$10.4 billion, over one and a half times the 1977 level. They rose much faster than production.

An estimated 84,000 jobs in Illinois were directly related to producing manufacturing exports in 1981. About 73,000 additional jobs were required to produce materials and parts for incorporation in products exported from the 50 states. Thus, 157,000 jobs in Illinois were dependent on exports of manufactured goods—about one of every eight manufacturing jobs in the state.

Illinois led the nation in exports of agricultural products. They totaled \$3.3 billion in FY 1982, more than three times the FY 1977 value. The state ranked first in shipments of soybeans and products and feed grains. Almost \$1 out of every \$2 of Illinois' farm sales came from exports.

Ranked third in manufactured exports

Illinois exports of manufactures totaled \$10.4 billion in 1981, over 6 percent of the U.S. total. The state ranked third nationally as an exporter of these goods. Exports expanded by 64 percent from 1977 to 1981, much faster than the state's 36 percent increase in manufacturing output.

Illinois exports a wide variety of manufactures. Nonelectric machinery—accounting for half of Illinois' overseas sales in 1981—was the leading export, followed by food products and electric/electronic equipment. The state led the nation in foreign sales of nonelectric machinery, and was third in both food products and electric equipment. In addition, sizable amounts of chemicals and transportation equipment were sold overseas.

Exports of nonelectric machinery in 1981 were valued at \$5.2 billion, 78 percent above the 1977 level. This growth rate far exceeded the rate of expansion in the industry's total output, which advanced by 41 percent during the period. As a result, the growth of exports generated nearly 37 percent of the production increase between 1977 and 1981. Although these exports were 19.1 percent of output in 1977, they accounted for 24.2 percent in 1981. Thus, by the latter year, \$1 out of every \$4 earned by the industry was directly related to foreign sales. An estimated 37,700 workers were directly involved in producing this machinery for export.

Manufactured food exports reached \$1.2 billion in 1981—up 59 percent from the 1977 value. The food industry was Illinois' second largest with output totaling \$18.3 billion in 1981. Most of the industry's products were shipped to domestic consumers, but about \$1 out of every \$16 was attributable to export sales in 1981. An estimated 2,700 workers were employed in the production of exports. Nationally, Illinois' food product sales to foreign countries accounted for nearly one-tenth of all U.S. food product exports.

Electric and electronic equipment exports, valued at \$1.1 billion, more than doubled between 1977 and 1981. Production in that industry increased 32 percent in the period. In 1977, \$1 out of every \$17 of the industry's production was attributable to export sales. By 1981, this ratio had jumped to \$1 out of every \$10. The percentage of employment directly related to exports also increased during the period, from 7 percent of the industry's work force to 10 percent. In 1981 that share represented 14,700 jobs.

The state's economy benefits from goods produced not only for direct shipment to foreign destinations but also from those for ultimate export through other states. Tables 6 to 8 show Illinois' export figures for manufactures including the output of the supplying establishments that furnish parts and materials to manufacturers producing goods in final form for export. Such indirect exports are particularly important in industries whose products require fur-

(continued on back cover)

Explanatory Notes

State export statistics presented in this report are estimates, in contrast to national export statistics, which are compiled from export documents prepared at the time goods leave the country. This note considers the reasons for, and consequences of, that difference.

Export estimates for each state are needed in order to measure the relative impact throughout our nation of changes in goods sold abroad. National export data are compiled each month in detail by types of goods sold and summarized in large commodity aggregates and overall totals—but in order to measure exports by each state of origin, which is not identified in shippers' export documents, special studies are necessary.

This report—one in a series of reports for each state—brings together state export estimates from studies by various U.S. Government agencies on manufactured goods, agricultural products, fishery products, and selected minerals. Overall totals for all goods exported from each state are not shown since these studies differ in methodology, frequency, export valuation, and U.S. geographic coverage, and the manufactures and agricultural studies somewhat overlap the products covered.

Manufactured Exports in this report relate to manufactures as defined in the Standard Industrial Classification (SIC) and include manufactured food, mineral fuel products, fats, oils, firearms, and ammunition not typically part of the Standard International Trade Classification (SITC) definition of manufactures. For the United States as a whole, exports of these additional products totaled \$28.5 billion in 1981. Exports, normally valued at the port of exportation, are adjusted to f.o.b. plant values to make accurate comparisons with production (shipments) data.

The state estimates for manufactured goods are based on surveys of manufacturers conducted by the Industry Division of the Bureau of the Census. These studies are for selected years; cover the continental United States, Alaska, and Hawaii; and present data classified by the 20 major SIC industry groups (2-digit). Tables 1 to 3 show

the value of state exports and state production, and the number of workers employed in manufacturing plants producing the finished goods for direct shipment to foreign destinations.

State economies also benefit from manufactured goods produced for ultimate export through other states, and from jobs related to manufactured exports which are generated in nonmanufacturing industries. In the table below, percentages show the full impact of export-related manufactures on state employment. Tables 6 to 8 show the percent of production and the value of state export-related manufactures—direct exports plus indirect exports or the value of materials and parts incorporated in products exported from elsewhere in the nation—and the number of state export-related workers employed in manufacturing plants producing these goods. Table 8 also shows the total number of workers related to manufactured exports—in manufacturing plus the number in nonmanufacturing industries supporting manufactured exports by supplying materials or services such as forwarding, warehousing, transport, and other foreign trade-related services.

Agricultural Exports relate to food products other than those from marine sources, unmanufactured tobacco, and other agricultural products simply processed such as fibers, raw hides and skins, fats and oils, wine and beverages other than distilled types.

The state estimates for agricultural exports are from studies prepared by the U.S. Department of Agriculture. Exports reflect shares in national exports according to each state's production and sales data. Export values were obtained by multiplying each state's share of farm production by commodity times the total export value for each of the respective commodities. These annual studies are for fiscal years ending September 30 and for all states except Alaska, and show data classified by 18 commodity groups. Tables 4 and 5 show the value of state exports and the percent of farm sales.

Other Exports—Fishery products, various minerals, and fuel export estimates shown in the Highlights on page 1 for selected states are from studies prepared by the National Oceanic and Atmospheric Administration (NOAA), the U.S. Department of Interior, and the U.S. Department of Energy, respectively. Exports generally reflect shares in national exports according to state production.

Annual Exports and Employment Related to Manufactured Exports

	Manufactured exports	Manufacturing employment		Total employment, including nonmanufacturing employment	
	(million dollars)	(thousands)	Percent of manufacturing employment	(thousands)	Percent of civilian employment
Illinois *					
1976	6,660	156.9	12.5	240.4	5.1

* Exports reflect shares in national exports according to each state's production. ¹ Commercial sales plus net Commodity Credit Corporation loans and purchases under price support programs. ² Includes exports that were not apportioned among states. ³ Less than \$500,000. ⁴ Not available. ⁵ Less than \$100,000. -- Not applicable.

TABLE 6

Illinois Manufactured Production, Export-Related Manufactures and Employment, 1981

- About 1 out of 8 Illinois jobs in manufacturing are due to exports.
- Three industries—nonelectric machinery, electric/electronic equipment, and fabricated metals—accounted for 54 percent of Illinois' export-related jobs in manufacturing.

Industry group	Production (million dollars)	Export-related manufactures	Export related as percent of production	Employment for export- related manufactures (thousands)	Employment for export related as percent of total employment
Total¹	126,986	17,039	13.4	157.0	12.9
Machinery, except electric	21,295	6,045	28.3	47.9	23.3
Primary metal industries	10,038	1,783	17.7	13.4	17.1
Electric and electronic equipment	11,452	1,564	13.6	21.4	14.8
Food and kindred products	18,328	1,534	8.3	4.6	4.9

¹ Total includes production and export-related values, and employment numbers which are withheld for certain industry groups to avoid disclosure of individual companies' data. ² 1980. ³ Less than 50 employees. ⁴ Less than one half of one percent.

— Not applicable.

TABLE 7

Illinois Growth in Export-Related Manufactures

- The 67 percent growth in the value of export-related manufactures from 1977 to 1981 was much faster than the rate of expansion in production.
- Over two-fifths of the increase in nonelectric machinery production was generated by growth in export-related manufactures.

Industry group	Export-related manufactures (million dollars)		Percent increase from 1977 to 1981		Export-related increase as percent of production increase 1977-81
	1977	1981	Export related	Pro- duction	
Total	10,216	17,039	67	36	20

Note: Totals include values for industry groups which are not shown separately.

TABLE 8

United States Export-Related Manufactures and Employment by State

- California, New York, Texas, Pennsylvania, and Ohio led the states with the largest number of jobs related to manufactured exports.
- Employment rates were highest in Connecticut, Washington, Ohio, and Delaware for jobs in all industries related to manufactured exports.

State	Rank as export related in 1981	Export-related manufactures				Employment for export related as percent of manufacturing employment	Total employment related to manufactured exports	
		1977 (million dollars)	1981	Percent increase from 1977 to 1981	Percent of state production 1981		(thousands)	Percent of civilian employment
U.S., total	--	142,404	271,703	91	13.4	12.8	4,794.0	4.7
California	1	13,319	27,399	106	14.2	14.5	526.5	4.7
Texas	2	9,196	22,651	146	12.5	12.7	285.5	4.2

Exports of U.S. Manufacturing Industries Related to Domestic Production, 1981

Direct Exports and Indirect Requirements to Support Exports

Note: Percentages shown for each industry indicate the total relative impact of exports on the domestic economy, including direct exports and goods shipped from domestic establishments for use as inputs in manufactured products exported from other establishments. Such inputs are included in domestic production industry totals.

continued from page 1

ther processing such as primary metals, fabricated metal products, and chemicals and also in those industries whose products constitute components and parts for assembly into machinery, electric equipment, and transportation equipment.

The Census Bureau has estimated that the full impact of U.S. exports on Illinois' manufacturing activity was 13.4 percent rather than the 6.2 percent attributable to direct exports as shown in table 3. Thus, of the expanded manufacturing output generated between 1977 and 1981, 20 percent—or \$1 out of every \$5—was due to export-related shipments.

Led nation in agricultural exports

Illinois' share of U.S. agricultural exports in fiscal year 1982, including some manufactures of farm origin, totaled \$3.3 billion, a 30 percent increase from the FY 1977 level. The state remained the country's leading agricultural export state in FY 1982, as it had been in FY 1977. Soybeans and products and feed grains—at \$1,482 million and \$1,371 million respectively—were the principal exports. Illinois ranked first in shipments of soybeans and products and feed grains, and fifth in shipments of meat to world markets.

The growth in exports of agricultural products from FY 1977 to FY 1982 accounted for 37 percent of the rise in farm sales. The export contribution to each dollar of the state's farm sales amounted to 43 cents in 1982.

Exported coal

Bituminous coal export sales were almost \$26 million in 1981.

Export-related employment sizable

Illinois' \$10.4 billion worth of manufactured exports provided direct employment for an estimated 84,000 workers in 1981. Those jobs constituted 6.9 percent of the total manufacturing employment in the state. From 1977 to 1981 the number of workers engaged

in the production of manufactures was virtually unchanged, while employment directly related to exports advanced by 12 percent. Over two-fifths of these workers were concentrated in the nonelectric machinery industry. These jobs accounted for 18 percent of the work force in that industry.

In addition, an estimated 73,000 jobs were required in the state to manufacture products used by other establishments in the United States as inputs for manufactures that were ultimately exported. Thus, an estimated 157,000 jobs in Illinois were directly or indirectly dependent on exports of manufactured goods. This was 12.9 percent of all manufacturing employment in the state.

More than half of the jobs dependent on manufactured exports were concentrated in the nonelectric machinery, electric/electronic equipment, and fabricated metals industries. These jobs accounted for one out of four jobs in the nonelectric machinery industry and one out of seven/eight jobs in the electric/electronic equipment and fabricated metals industries.

An additional 118,400 jobs were generated in nonmanufacturing industries that supply materials and services supporting manufactured exports. Illinois' total employment related to manufactured exports amounted to 275,400 jobs, the sixth largest among the states. Illinois outpaced the U.S. average with 5.4 percent of its civilian employment involved directly or indirectly in the export of manufactured products in 1981, compared with 4.7 percent for the entire country.

It is estimated that Illinois' farm employment related to exports in 1982 amounted to about 56,700 or nearly one out of every two farmers. This estimate assumes that the number of farmers dependent on exports corresponds to the ratio of exports to farm sales in the state. Depending on numerous variables, including the character of the product, mechanization, and degree of intensiveness of farming, it may somewhat understate or overstate the actual number dependent on exports.

STATE EXPORT REPORTS

This report is one of a series of 50 prepared by the Office of Trade and Industry Information/Trade Information and Analysis, International Trade Administration on exports from the individual states. Data on manufactured and agricultural exports are presented in tabular form for a series of years. In addition, recent information is included on state exports of fish, fish products, and minerals. The statistics on 1981 exports of manufactures by state were taken from *Origin of Exports of Manufactured Products, 1981 Annual Survey of Manufactures*, M81 (AS)-5, issued by the Bureau of the Census in May 1983. That publication can be ordered from the Data User Services Division, Customer

Services (Publications), Bureau of the Census, Washington, D.C. 20233, or from any U.S. Department of Commerce District Office for \$2.75 per copy. Data for earlier years were taken from similar Census reports now out of print.

The information on state shares of agricultural exports was taken from various issues of *Foreign Agricultural Trade of the United States* published by the U.S. Department of Agriculture. Special compilations on exports of minerals and fuels by state were provided by the Bureau of the Mines, U.S. Department of Interior, and by the Energy Information Administration, U.S. Department of Energy, and on fish and fishery products by National Oceanic and Atmospheric Administration, U.S. Department of Commerce.
